## SAVE THE ENVIRONMENT, SAVE THE EARTH – GO GREEN

The condition of the environment is constantly changing, but almost all scientists now agree that it is not changing for the good. They agree on one other thing as well: human activities are the major reason for the incredible harm dealt to the environment in the last 100 years. Some of these changes cannot be reversed. However environment is the most important resource for life. We get water, power and oxygen from the environment. It helps to clear pollution and is a large habitat for animals. We get lots of resources from there but if we use too much and it doesn't come from sustainable forests we may run out of resources, which is dangerous.

We all have probably noticed that green is everywhere these days – in the news, politics, fashion, and even in technology. As globalization makes the world become smaller, it becomes increasingly easy to see how the lives of people, plants and animals and ecosystems everywhere are closely synced up with one another. So toys made in China can affect the quality of life in India, pesticides used in Europe can affect the health of people in the U.S., and greenhouse gas emissions from Australia can affect a diminishing rainforest in Brazil. The truth is that every single thing we do every day has an impact on the planet – good or bad. The good news is that as an individual we have the power to control most of our choices and, therefore, the impact we create: from where we live to what we buy, eat, and use to light our home, to how we shop, we can have global impact. Embracing a greener lifestyle isn't just about helping to preserve equatorial rain forests; it can also mean improving our health and ultimately improving our overall quality of life. So why wouldn't anyone want to go green?

Here we at BPPIMT believe and act in our limited capacity and in our individual sphere of activities to save the environment by going for **Green** as and when and where we can. So let us join our hands together to save the environment, to save our mother earth and build our bright future.
